WHO WE ARE

Pacific Hydraulics was formed in 1990 and has grown to become one of the most significant privately owned hydraulic sales and service providers in the country. With a nationwide network of branches, Pacific Hydraulics is able to fulfil a large range of your hydraulic needs.

Pacific Hydraulics offers a broad range of capabilities, including distribution of hydraulic products and components, service and repair and system design.

With a growing network of fully equipped sales and service outlets, Pacific Hydraulics provides unparalleled customer service and support to a wide range of industries, including agriculture, mining, manufacture, civil, marine and heavy industry.

Pacific Hydraulics is the only Australian tier one stocking distributor of Sauer-Danfoss-Daikin, as well as operating the only factory authorised service centres for Sauer-Danfoss-Daikin products in Australia.

OUR CAPABILITIES

At Pacific Hydraulics, we understand the critical need for high quality products, service and repairs.

Each of our locations has experienced staff and the necessary equipment to provide four core services:

- Sales of hydraulic components and spare parts.
- On-site field service.
- In-house repairs.
- Design and assembly of integrated hydraulic systems and controls.

SALES OF HYDRAULIC COMPONENTS AND SPARE PARTS

Pacific Hydraulics is proud to distribute an extensive range of world-leading hydraulic brands. This range of hydraulic components and spare parts ensures Pacific Hydraulics is able to meet customers' needs efficiently and effectively.

Pacific Hydraulics is an official distributor of the following brands and products:

Sauer-Danfoss-Daikin is a worldwide leader in the design, manufacture and sale of engineered hydraulic, electric and electronic systems and components, primarily for use in mobile equipment applications.

BHA specialises in the importation of quality hydraulic products from many of the world's leading manufacturers.

Pacific Hydraulics is proud to provide our customers with the following products and brands:

Specialising in industrial and mobile hydraulics, Bosch Rexroth provides a large range of motors, pumps and valves.

Hydac provides a complete range of hydraulic products, including accumulators, filtration products, coolers and accessories.

Ryco Hydraulics offers a broad range of hydraulic hoses to suit a variety of applications.

Salami focuses on production of high performance monoblock and modular directional valves and gear pumps.

Nordon is Australia's leading source of durable agricultural cylinders in the mobile, agricultural and industrial sectors.

SPX Power Team specialises in precision quality high-pressure jacks and specialised hydraulic tools.

Brand Hydraulics designs and manufactures hydraulic valves, electronic controllers and electro-hydraulic products for an array of industries.

Hayden Industrial Products are a recognised leader in the provision of heat exchange systems and components worldwide.

EPG Screwed Gland Cylinders are available in sizes from 1.5" bore to 5" bore with standard stroke lengths from 6" to 48".

Specific brands and products may vary by location.

ON-SITE FIELD SERVICE

A modern fleet of fully equipped service vehicles and dedicated fully-trained service technicians enables Pacific Hydraulics to provide a comprehensive range of on-site hydraulic services. These services include system trouble shooting and repair, system installation, modification and maintenance and are available 24 hours per day, 7 days a week. We are also able to provide mobile hydraulic workshops that can be transported and conveniently set up on customers' sites.

Programmed, preventive and predictive maintenance is an essential service offered by Pacific Hydraulics. Field technicians work closely with customers to ensure that customer equipment remains operational wherever possible, maintenance services often occurring during customers' programmed shutdowns.

To further minimise downtime, we have mobile off-line filtration units capable of cleaning fluids down to 3 micron, whilst the customers' equipment remains operational. These units have integral particle counters with computer generated read-outs to verify the oil cleanliness level achieved.

Pacific Hydraulics' on site service capabilities are further enhanced through mobile pump and motor pull down and stripping benches for large units, with rotary head mount and adjustable hydraulic extraction press units for removal and installation of bearings.

IN-HOUSE REPAIRS

Pacific Hydraulics is proud to operate the only factory authorised service centres for Sauer-Danfoss-Daikin products, other than Sauer-Danfoss-Daikin themselves.

Each Pacific Hydraulics location has a fully equipped engineering and hydraulic workshop with full testing facilities. Pacific Hydraulics also has machine shop capabilities, cylinder barrel honing and hydraulically operated cylinder stripping benches, including the unique ratchet rotary head technology. This technology is capable of generating the high torques of up to 185,000 ft/lbs necessary to remove cylinder heads and glands.

Testing of repaired products is conducted from our state of the art open and closed loop test rigs with power capabilities of up to 225kW. These units combined with our pressure and flow electronic diagnostic equipment enable us to provide our customers with fully computer generated, printed reports. Further, we have testing facilities for high pressure jacks to 690bar.

DESIGN AND ASSEMBLY OF INTEGRATED HYDRAULIC SYSTEMS AND CONTROLS

Pacific Hydraulics designs and assembles fully integrated, hydraulic systems and controls, providing customers with tailored, cost effective solutions, whatever the requirement.

At Pacific Hydraulics we pride ourselves on having experienced staff that are highly skilled in the design, calculation, product selection and commissioning of complex hydraulic systems and controls.

Our engineering department has certified professional engineers who can model and calculate the fluid dynamics and associated mechanical stresses present in hydraulic systems and hence design optimum solutions to each application.

System trouble shooting and repair, system installation, modification and maintenance are available 24 hours per day, 7 days a week.
